1 Introduction

In the era of Big Data, organizations have adopted a data-driven approach to decision-making. However, the complexity of data ecosystems often leads to challenges in understanding the flow and transformation of data. This paper introduces the T-DAR framework, which stands for Targeted Data-Actions-Results, as a methodology for analyzing data lineage and ensuring actionable insights.

2 T-DAR Framework Overview

The T-DAR framework is inspired by the Data-Action-Result (DAR) model of most healthcare information systems.
